30 October 2003 Historic Resource Addendum for: CLARK HALL

HISTORY

Clark Hall was constructed in 1899. The architects were Josehans and Allan. The building was one of two projects including Lewis Hall, for which \$50,000 was appropriated by the state legislature to construct dormitories.Both buildings are named for the explorers. Both buildings were sited in the Oval Plan, also known as the Fuller Plan of 1898.

Clark Hall served as a dormitory for women until 1936, except for an interlude dduring World War I when it was loaned to the Navy for use as an officers' hospital. After 1936 it functioned as the original student union building until the present student center, the HUB was completed in 1952. Since 1952 Clark Hall has hosted the Air Force, Army and Navy ROTC programs of the university. (Source: "the campus guide, University of Washington, An Architectural Tour" by Norman Johnston.)

DESCRIPTION OF THE BUILDING

The Hall is of brick construction with minimal embellishment. The exterior retains most of its original character except that the turrets flanking the main entrance have been removed. The bays remain, but the pyramid roofs have been removed. Remodeling of the interior has removed any architectural character that might have originally existed.

LANDSCAPE AND OPEN SPACE

Clark Hall was sited to take advantage of views of the Cascades and Lake Washington and later became a part of the oval plan of 1898 for the campus along with the still remaining Lewis Hall and Denny Hall. The building fronts on Skagit Lane and is surrounded on the north and east by Stevens Way. To the south is a pedestrian way, open space and an American elm (Almus Americana), historic for its lineage as a scion of the tree in Cambridge, Massachusetts, where in 1775 George Washington assumed the leadership of the Continental Army. It replaced an earlier elm on the campus hit by lighting, and in turn provided a replacement for the one in Cambridge, which suffered a similar fate. (Source, Norman J. Johnston, The Campus Guide, University of Washington.)

(remainder to be provided by Bill Talley)

SCOPE OF THE PROPOSED RENOVATION

It has two roof types; asphalt shingled, steeply pitched main roof section and two flat sections at the "bay window" flanking the front entry. The front entry canopy also has a flat roof. All flat areas have membrane type roofing systems. All flashing, parapet coping and roof accessories are copper. Drainage is by copper gutters and copper downspouts with conductor heads.

The roof and flashing will replaced and gutters and downspouts replaced as needed. It is unlikely that the pyramid roofs over the bays will be replaced, but replacement will be considered.

POTENTIAL MITIGATION MEASURES

If feasible, the pyramid roofs over the bays removed in the 1950's will be replaced.

Apparently the original roof materials were wood shingles. It is not anticipated to replace the asphalt shingles with wood. It is likely that the replacement will be asphalt shingles (to be determined.)
